MARINE INTERIOR Architectural Panel System

LIGHTWEIGHT

FINA Natural Stone, Porcelain and Engineered Quartz panels weigh about 3.5 pounds per square foot. Our panels are the perfect solution where beautiful architectural finishes are desired, but weight is an issue.

STRONG

FINA panels are constructed with a lightweight structural honeycomb backer, providing outstanding flexural strength and are 60-times more impact resistant, making them almost indestructible. FINA panels are the best solution for most any environment.

DESIGN WITH COLORS & TEXTURES

With hundreds of color and texture options to choose from, FINA panels offer you an almost ultimate design pallet. We can process large panel sizes up to 6' x 10', in some cases, and will cut to size per your project requirements.

APPLICATIONS

FINA panels are perfect for walls, ceilings, counter and table tops, bathroom surrounds, accent areas and more. Contact us today to find out what material options are best suited for your project!
