ELEVATOR & LOBBY Architectural Panel System

LIGHTWEIGHT

Fina Natural Stone, Porcelain and Engineered Quartz panels weight about 3.5 pounds per square foot. The reduced weight provides more finish options for elevator cab interiors. Perfect for interior remodels and new construction, panels can be installed over an existing substrate eliminating the need for demolition.

STRONG

FINA panels are constructed with a lightweight structural honeycomb backer, providing outstanding flexural strength and are 60-times more impact resistant, making them almost indestructible. Long lasting and durable, we test our panels to meet the required building codes for your project.

DESIGN WITH COLOR & TEXTURES

With hundreds of color and texture options to choose from, FINA panels offer you an almost ultimate design pallet. We can process large panel sizes up to 6' x 10', in some cases, and will cut to size per your project requirements.

APPLICATIONS

FINA panels are perfect for elevator cab and lobby interiors, column covers, entryways, bathroom surrounds, accent areas, exterior walls and more. Contact us today to find out what material options are best suited for your project!
